### Accessibility Questions

- What corrections did you have to make?
  - I had to add alt text descriptions to my images and aria labels to the buttons. I also had to add a language identifier at the top of my html file. Everything else passed the accessibility checks!
- I think my website is still usable without CSS, although obviously it's not quite as user-friendly. When CSS is turned off, the images take up the majority of the space, and links/buttons get super small. However, the site is still readable and pretty navigable (images below).

- Is your site tabbable? In other words, without the use of the mouse, are all the links and buttons accessible using the tab key?
  - Yes! See below. It jumps right from the sidebar to the main content and then makes a loop around all the content.
